Toilet Care Environmental Impact

Toilet Care Market Growth

In the United States alone, more than 180 million units of toilet bowl cleaners and deodorizers were sold in 2022

The global toilet care market size is expected to grow by USD 1.89 billion as one of the primary factors driving this industry is the emergence of eco-friendly and premium products. Multiple studies show that these cleaning products can adversely affect our health and environment .

Health & Safety Effects

Respiratory problems are common issues caused by exposure to various cleaning products. Approximately 6% of employees in the janitorial sector experience workplace injury from chemical exposure. However, all building occupants come into contact with cleaning products in a direct or indirect way . It is common to see warnings on the label of cleaning products. For example, on popular toilet bowl cleaning product safety data sheets, there are multiple warnings about chemical burns and how the product may be fatal if swallowed as well as other warnings about vapour or fumes. A chemical added to most disinfectants, called alkylphenol ethoxylates (APES), has been shown to cause disruption in hormones of the human body.

Environmental Impact

In addition to the health and safety concerns, toilet cleaning products, in particular pose serious threats to the environment due to large amounts of water used by toilets. Many cleaning agents are released into the environment and biodegrade incompletely or slowly, which poses a risk of water supply contamination and impacts wildlife.

A New Alternative Has Arrived

The Automatic Toilet Cleaning System

The Automatic Toilet Cleaning System, by MG Inventions Canada Inc., is the solution to helping protect our health and planet. The ATCS is a new invention that is fully automatic. This self-dispensing product is non-toxic, contains no harsh chemicals and is plumbing and septic safe. It is currently in the process of receiving the highest accreditation by Underwriters Laboratories (UL) certifying this product is eco-friendly. To further aid our environment, both the product and the packaging are 100% recyclable.

Key Benefits of the Automatic Toilet Cleaning System

- ✓ No Installation
- ✓ Cleans with each flush
- ✓ Super Cleaner
- ✓ ECO-Friendly
- ✓ Recyclable
- ✓ Lasts for 1700++ Flushes
- ✓ Non-Toxic
